

Help limit the risk of cross-contamination

Protect your residents with single-use product solutions

Cardinal Health is proud to offer a wide range of disposable incontinence care products and single-patient use negative pressure wound therapy (NPWT) systems to help combat the spread of harmful bacteria and infectious disease.

Disposable incontinence care products

The discovery of live virus in the stool of confirmed COVID-19 patients¹ introduces the possibility of fecal transmission. Reducing transportation of contaminated laundry, such as reusable underpads and washcloths, can help protect your facility and your patients.

Switch to single-use incontinence solutions that allow you to **contain and dispose** rather than launder and re-use, helping to limit the risk of transferring harmful bacteria.

For more information or to order, call **877.CARDINAL**, visit **cardinalhealth.com** or contact your Cardinal Health sales representative.

Single-patient use NPWT devices and accessories

Disposable NPWT is more important than ever. The Cardinal Health™ PRO to GO™ therapy system is designed for single-patient use at your facility. This kit comes prepackaged with 10 days' worth of therapy, three dressing kits, two canisters and a carrying case.

Reduce the risk of cross-contamination by choosing a prepackaged kit to be used on only one resident and disposing of it when therapy is complete.
