Evaporation

Absorption

Approximately 20% of fluid is locked inside the dressing, away from the skin.

On average 80% of the fluid is evaporated.

Cutting-edge • Unique • Revolutionary

PICO° is changing the rules of Negative Pressure Wound Therapy (NPWT).

• Approved for use on acute wounds, chronic wounds and surgical incisions.

• Proprietary, silicone-based, four-layer technology uniquely manages wound fluid by simultaneously evaporating and locking it away, keeping excess moisture away from the wound and periwound area.¹ No need for a canister!

• Expansion of NPWT benefits beyond the wound site by providing compression to the periwound area, which may help reduce edema and improve perfusion.²

Top film layer has a high moisture vapor transmission rate¹ to transpire as much as 80% of the wound fluid¹

Super absorbant core locks fluid away from the wound³,⁴

Silicone adhesive layer protects the wound environment and reduces pain on removal⁵,⁶

Pioneering airlock layer distributes NPWT across the wound while enabling movement of fluid through the dressing³,⁴

PREPARED FOR USE IN
Acute Wounds
Chronic Wounds
Surgical Incisions

Approved for use on acute wounds, chronic wounds and surgical incisions.

Proprietary, silicone-based, four-layer technology uniquely manages wound fluid by simultaneously evaporating and locking it away, keeping excess moisture away from the wound and periwound area.¹ No need for a canister!

Expansion of NPWT benefits beyond the wound site by providing compression to the periwound area, which may help reduce edema and improve perfusion.²

On average 80% of the fluid is evaporated.

Approximately 20% of fluid is locked inside the dressing, away from the skin.
