

EXPECT MORE in Exudate Management

Dressing Selection

Zetuvit® Plus Family of dressings are versatile, which can simplify selecting the right dressing. They are indicated for a wide range of acute and chronic wounds. Here are some specific examples:

When daily dressing changes are needed:

- Enzymatic debridement
- Very heavy exudate
- To monitor the wound often due to concern for bioburden or other complications

To decrease frequency of dressing changes:

- Wounds with moderate to heavy drainage
- Wounds under compression
- Wounds with skin substitutes
- To minimize staff time
- To reduce exposure

Silicone Border

- No secondary dressing or additional fixation required
- Protection of periwound
- Barrier to bacteria and viruses
- Shower proof
- Pressure redistribution

Silicone Non-Border

- Hands free when applying multilayer compression wraps or a secondary dressing
- Protection of periwound
- Additional dressing securement required

Non-Adhesive

- Full range of exudate levels
- Quick absorption for heavily exuding wounds
- Additional dressing securement required
